

Lightjet Large Format Poster Printing

The Lightjet 430 produces the highest quality large format prints available today. Using state-of-the-art laser technology, the Lightjet produces over 68 billion colors, yielding a true continuous tone photographic print.

Lightjet prints are excellent for Posters and POP signage. They are printed on fade-resistant Fuji Crystal Archive photographic paper (50 year indoor UV warranty). These prints can be used on their own or coupled with various mounting and lamination techniques to suit your custom application.

Our Lightjet poster prints are an economical alternative for short run “one time use” applications..

Poster prices include a file setup charge and first approval print. Additional approvals and mounting and lamination of finished prints may extend turnaround times. Normal turnaround for a run of posters is 2-3 days once approved.
